PURE SLIM

HOW
DOES
IT
WORK

PURE PRO

PURE combines the purifying action of an ePM1, Coarse and HEPA filter system with the sterilizing action of UV-C light.

Besides, it is equipped with intelligent technology capable of detecting the concentration of different types of particles in the air to apply the most appropriate cleaning process at all times. PURE is capable of sterilizing and purifying up to 3,400 m³ per hour according to the international CADR standard to measure the effectiveness of air purifiers.

PURE PRO L

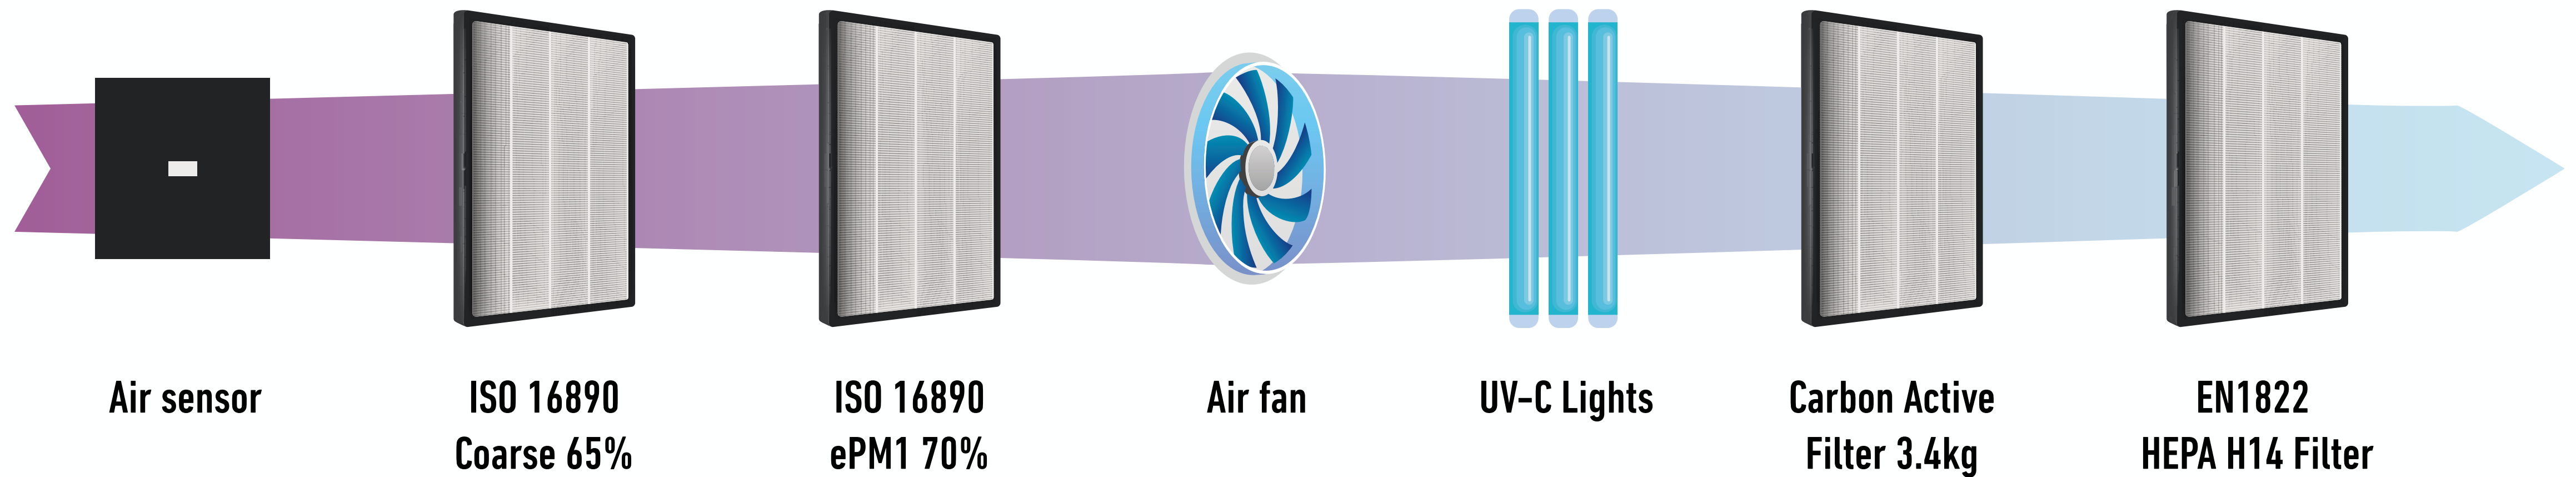

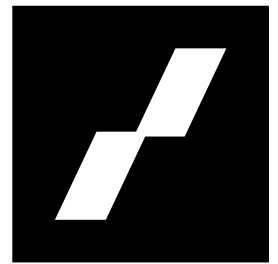

PURE PRO M

HOW DOES IT WORK

Pure has an intelligent system that activates the appropriate cycles based on particle concentration detected in the air.
